Hi John:

Cecil here, I wanted to acknowledge my receipt of The Doer's Guide to Wet-Plate Photography. It's a fine example of your expertise in wet-plate and your excellent teaching skills that allows you to teach effectively. What you have created is the Bible of wet-plate. I'm still in the process of acquiring my equipment, chemicals and materials and if nothing else goes right I will always be able to say I did at least one thing right, I obtained your manual. It's amazing how you have manage to encompass all the important areas and then some. Those videos are 'knock out's' and if one is not turned on by those one must not have any blood in their veins. True Wet-Plate Porn. HA!

Seriously now you are the 'Man' and when you speak, write communicate in some fashion everyone listens!

The supplier information is fantastic. Terrific help for an old film guy like myself.

What a great area you live in as well. That part of the country with it's history and scenery is amazing. Unfortunately living in Nevada surrounded by sand and no water it's like living in a 'cat box'. People here are just happy to have the turds taken out and some new sand every now and then.

All My Best John!

You are amazing human being, keep the faith brother.

*Cecil Hanson*
